

WS Amati Global Innovation Fund DDQ (C Class)

JUNE 2026

Risk Warning

Past performance is not a reliable guide to future performance. The value of investments and the income from them may go down as well as up and investors may not get back the amount originally invested. The return on investments in overseas markets may increase or decrease as a result of exchange rate movements. There may be occasions where there is an increased risk that a position in the Fund cannot be liquidated in a timely manner at a reasonable price. In extreme circumstances this may affect the ability of the Fund to meet redemption requests upon demand. Prospective investors should always read the Key Investor Document and the Prospectus, which contain full details of the costs and charges applicable to the Fund as well as specific risk warnings. These documents are available [here](#).

WS Amati Global Innovation Fund DDQ (C Class)

Fund Objective

The Fund aims to provide capital growth over the long term (periods of 5 years or more) by investing in companies that create value from innovative products, services and business models that address key business, societal and consumer challenges, and where the impact of such innovation is not fully priced in by the market.

These include traditional areas of innovation such as technology, healthcare and industrials as well as other sectors which pioneer, enable or adopt innovation. The Fund invests globally.

Investment Approach

The WS Amati Global Innovation Fund looks for opportunities where the positive impact of innovation is not fully priced in by investors. That is best uncovered on a company level using a fundamental, bottom-up, stock picking approach.

Innovative companies are often involved in technically complex and specialist areas. We believe this complexity brings opportunity and are comfortable embracing and researching it to uncover differentiated stock ideas.

Our managers' experience and qualifications, as well as the informational advantage of the Amati research platform, enable us tackle that challenge. As a result, our stock ideas are often very different from the popular holdings in other global portfolios.

In looking for mis-priced beneficiaries of innovation we do not just focus on high growth early-stage innovators at the leading edge of the innovation frontier. We examine the whole value chain, mapping out the cluster of companies that are positively impacted.

We're interested in both transformative and incremental innovation opportunities. We're interested in the pioneers that drive innovation forward, the enablers that provide tools and services to these pioneering innovators, and we're also interested in companies that derive value from adopting that innovation (adopters) - either as fast followers (sometimes to avoid the threat of disruption) or as lateral beneficiaries.

We're looking for optimal risk/reward opportunities. In some areas it is worth taking the risk of investing in a pioneer but in others investors are better off backing lower risk beneficiaries that enable or adopt the innovation.

This approach avoids excessive style bias, reducing exposure to extreme style rotations and volatility that sometimes affects innovation-linked sectors.

Pioneers	Enablers	Adopters
Creating Innovation	Supporting Innovation	Implementing Innovation
Higher risk, higher reward, less mature businesses, often with a single product dependency.	Picks and shovels, suppliers with a diversified exposure to innovative clients and product.	Established businesses, lateral beneficiaries of innovation, fast followers in a changing industry.

By not limiting ourselves to only high growth early-stage companies we also ensure that portfolio holdings on average have lower balance sheet and funding risk, reducing the risk of permanent loss of capital.

The Managers

Fund Managers Mikhail Zverev and Graeme Bencke, who run the WS Amati Global Innovation Fund, have collective investment experience spanning more than 50 years. Their investment careers span several market cycles, having worked through both exciting and challenging times for innovation equities, going back to the dot com boom and crash of 1998-2000.

The Fund Managers, who joined Amati in 2022 to launch the fund, have track records of long-term top quartile outperformance in global equity and ran successful multi billion-dollar global equity franchises for major international investment firms.

They also bring valuable first-hand insights into the dynamics of innovative companies, acquired in previous roles advising and raising capital for high growth businesses in technology, healthcare and engineering sectors.

The managers also have diverse academic and research backgrounds spanning semiconductors, biochemistry, neuroscience, nanotechnology, accounting and finance. This brings with it the knowledge of complex and highly technical industries at the forefront of innovation as well as sound judgement of the business and financial models and valuation discipline.

They share a history of an investment approach focused on technological change and innovation in global companies, backed by rigorous fundamental research and disciplined stock-picking.

As importantly, they are aligned with Amati's values and culture. Mikhail Zverev has a long-standing association with Amati founder and CEO Paul Jourdan, having known each other professionally for more than two decades and worked together for five years earlier in their careers. Managers have made significant investments into the fund at launch, fully aligning their interests with the fund investors.

WS Amati Global Innovation Fund DDQ (C Class)

The Amati Innovation Network

The UK is a global centre of excellence in multiple innovation areas - healthcare, technology, materials science, specialist industrials to name a few. It consistently ranks among the most innovative countries on key innovation metrics.

Investment research in the WS Amati UK Listed Smaller Companies Fund puts us in daily, in-depth contact with companies at the leading edge of these innovative industries. We benefit from direct access to founder entrepreneurs, senior executives and technical experts in these firms; with relationships often built over many years. This enables us to identify promising areas of innovation, assess their value and build an understanding of the global ecosystem of companies that are involved. This research synergy provides us with a unique and tangible informational advantage in managing the Global Innovation Fund.

In addition to this, the Managers regularly attend industry events and trade shows where they interact with technical and commercial personnel of the current and potential investee companies and listen to technical talks and presentations. This deepens their understanding of the respective industries and areas of innovation, and provides highly incremental information over and above what is typically considered by the more generalist global investors.

Amati Global Investors is a focused, specialist, independent, investor-run and investor-owned firm, with a patient, long term outlook, and a real alignment of interest between managers and clients. These values and alignment of interests extend to the WS Amati Global Innovation Fund and its managers, who have invested a significant amount of their personal savings into this Fund.

Resources Available to the Managers

Over many years Amati has developed its own browser based research system: Amati Connex. Notes of every phone conversation and meeting we have with companies, brokers and advisers are logged in this system alongside research. The result is that we have all information and analysis on the universe of companies that we follow logged in one system, from where it can be retrieved expediently.

The software that we use for order management and compliance is also a proprietary system called the Amati Online Dealing System. This enables the fund managers to view the portfolio, to place new orders which are reconciled to current holdings and taken through pre trade compliance checks, to view details of all outstanding orders, and to book out details of trades, automatically generating and sending a deal sheet to the back-office.

This system has many additional functions, including: daily post-trade compliance checks and reconciliation with the back office; performance measurement; data compilation for report writing; managing the restricted list of stocks; monitoring inflows and outflows from the fund; monitoring broker commissions; and generating alerts when regulatory notifications need to be issued. It also allows screening of our addressable market of stocks by various parameters. It is a core platform for the business, enabling Amati to run funds efficiently in compliance with all of the relevant legislation.

Investment Process Overview

We adopt a disciplined idea generation, research, stock selection and portfolio construction process to identify and assess stock ideas for the Fund.

Our process consists of five distinct stages:

Innovation frontiers: we identify areas where we see tangible and valuable innovation that addresses a large and growing market. We prefer to back innovation which is already making a difference but has a lot further to grow, rather than making very long-term projections of what the world might look like in decades time.

Innovation clusters: we map out which companies are involved in the innovation frontier and stand to benefit from it - as Pioneers, Enablers or Adopters. We look across industries, regions and value chains to identify research targets.

Fundamental analysis: we analyse the exposure of the company to the innovation and model the financial impact of innovation on the business, as well as assessing the sustainability of the business model. We look for companies where innovation success brings or perpetuates superior growth, margins and return on capital with a 3-5 year investment horizon. Crucially, we also test whether our view is materially different from the market consensus.

Stock selection: we pick the highest conviction ideas which offer optimal risk/reward based on our non-consensus insight. We consider whether to back lower risk Enablers or Adopters or higher risk Pioneers.

Portfolio construction: we construct a high conviction, high active share portfolio which is suitably diversified by sectors, regions, innovation frontiers and by innovator categories.

This approach is backed by a broad range of information sources: hundreds of targeted company meetings per year, specialist information systems, external experts, as well as trade shows and specialist industry and academic publications.

We employ a consistent framework for value of the impact of innovation fundamentals and for assessing whether priced in by the market consensus.

WS Amati Global Innovation Fund DDQ (C Class)

Fundamental Research

This involves four tests that we apply to prospective investee companies:

Innovation test:

Is there novelty? Is there a clear, proven benefit in cost and functionality? Is there initial traction and adoption? What is the size of the addressable market?

Company test:

What gives company a "license" to benefit from innovation? How material is its exposure? Is there a roadmap to defensible competitive advantage? Is there a business model with attractive economics or a roadmap to one?

ESG and human rights test:

Are inputs and outputs/externalities sustainable and responsibly managed? Is there the right governance structure or roadmap to its improvement? Are there risks from the company's exposure to countries with poor freedom and human rights scores?

Non-consensus test:

Is there a material difference between our assessment of value of innovation impact vs. consensus expectations?

In performing these tests we are guided by 3-5 year time horizon. We expect the impact of innovation to become more visible to market consensus over this period and to begin being priced in into the share price.

Applying this framework enables us to quantify the upside if our view on innovation impact is right, understand the downside if we're wrong and determine our conviction and the level of non-consensus in our view.

How is the Portfolio Constructed?

The portfolio is constructed using rigorous, bottom-up stock-picking combined with an overlay of macroeconomic and sectoral factors. We diversify exposure over a number of innovation frontiers and also the allocation between pioneer, enabler and adopter categories.

Initial holdings are typically introduced at a 2%-3% weighting, expandable to 5% holding levels are led by conviction. We are benchmark agnostic in terms of construction. Maximum exposures are limited to 10%. Normally the portfolio is limited to between 30-40 holdings.

All due diligence carried out is subject to peer review before a final buy or sell investment decision is made.

We use our industry knowledge gained from company meetings, industry specialists and academic papers together with our own analysis to form views as to how the fund should be strategically positioned, and which types of risk to favour in our stock selection.

What prompts the Managers to sell?

There are a number of factors influencing sell discipline within the investment process.

We sell if our investment case has been realised and market consensus fully reflects the impact of innovation on company fundamentals.

We sell if our investment case is subsequently challenged by new information that reduces our conviction in our non-consensus view.

We sell if our fundamental, company specific investment case is materially threatened by exogenous risks such as macro, regulatory or ESG and human rights factors.

Environmental, Social and Governance

Amati Global Investors recognises that managing investments on behalf of clients requires considering a wider set of responsibilities in addition to seeking to maximise financial returns for investors.

Industry practice in this area is evolving rapidly and at Amati we have sought to define and strengthen our principles accordingly. Consideration of environmental, social and governance (ESG) issues has always been implicit in our investment decision-making process. In practice, almost every interaction with investee or potential investee companies involves engaging on some aspect of ESG. In fact, our responsible investment approach is ESGH - where H stands for human rights. Human rights concerns as well as wider ESG issues are fully integrated into our investment decision-making process. This reflects our commitment to considering the impact of our investments on people as well as the planet.

We are a signatory of the Principles for Responsible Investment (PRI), the world's leading proponent of responsible investment. We are also signatories to the UK Stewardship Code, which sets high standards for those investing money on behalf of UK savers and pensioners, and those that support them. The results of our engagement with investee companies vary and will depend on the degree of influence we have, which is linked to the size of our shareholding. In the interests of transparency and accountability, we publish our voting record on companies' proposals to shareholders every quarter on our website.

We always try to make a positive difference, even if only at the margins. Importantly, we almost always engage directly with the company itself and our views are not mediated by a broker or by an institutional proxy voting adviser.

Our ESG Statement is available on our website. It provides an overview of how our investment process takes account of our responsibility to represent investors in our funds in their capacity as shareholders in portfolio companies. It also explains the more complex issue of how our investment decisions consider the broader social and environmental impact of these companies.

WS Amati Global Innovation Fund DDQ (C Class)

Clean Trade Approach

Companies are becoming increasingly global in their operations, regardless of where they are registered or headquartered. For all Amati funds, including the WS Amati Global Innovation Fund, we have a global perspective when assessing ESGH issues in relation to current or potential future investee companies.

Amati CEO Dr Paul Jourdan is a founder trustee of the Clean Trade organisation which pursues a vision of a world free from the workings of the “natural resource curse”, which works to deepen conflict and perpetuate oppression, corruption and poverty. Its overarching mission is to secure the rights of all people to their natural resource wealth.

Clean Trade argues that where the level of freedom in a country falls below certain thresholds, there can be no reasonable expectation that Article 1(2) of the International Covenants on Human Rights being satisfied. In practice, this means Amati avoids investing in companies extracting natural resources from countries with severely authoritarian regimes, where civil liberties are greatly compromised, and governments are not at all accountable to citizens.

Clean Trade founding principles relate to natural resources industries, but this framework is relevant to innovation as well. Innovation in areas like law enforcement, surveillance or military technology can make societies less just and people less free if they fall into the wrong hands or are governed poorly.

Labour standards and environmental impact in technology supply chains, or negative social externalities of technological products and services are also more acute risks in countries with weaker freedoms. This is something we consider when managing the WS Amati Global Innovation Fund.

Freedom House Score

Using the Freedom House scale provides clarity, transparency and accountability on investment decisions. It is based on a methodology developed by an organisation whose reports are widely used by international policy makers, the media and political and business leaders.

Amati’s funds adopt and are committed to a Clean Trade approach for any investments in the natural resources sector. The baseline is deliberately set very low, so as not to take the drastic step of completely excluding investments in certain countries without adequate cause. We use the annually updated, and freely available global report from Freedom House, and rule out natural resource investments in countries scoring 15/100 and below. For countries scoring between 15 and 33, which are defined as Not Free, we require a reasonable explanation that the following three questions can be answered positively: i) does the population of the country have access to the information about the terms under which resources are being extracted? ii) if they don’t like the terms, can they protest safely? iii) if they protest, is there a fair chance of being taken notice of? In reality, investing in countries with very low Freedom House scores is extremely hazardous in any case, so applying this principle is unlikely to cause much conflict with our fiduciary duties as fund managers, but nonetheless, because applying a baseline results in the exclusion of certain investments on principle, we are explicit with our fund investors about this approach.

Investment Checklist

Environmental:

Appropriate environmental procedures
Adequate waste disposal systems
Initiatives to reduce emissions

Social:

Worker safety
Labour relations
Community and governmental relations

Governance:

Robust anti-corruption measures
Board and share structure
Well-managed supply chain contractors

Human Rights:

Adopting and advocating for a Clean Trade approach
Avoiding companies that tacitly support oppressive regimes

Amati is signatory to the UK Stewardship Code, a signatory to the UN-supported Principles for Responsible investment (PRI), and a supporter of the Task Force on Climate-related Financial Disclosures (TCFD).

Key Differentiators

- Growing demand and scope for innovation create a large and diverse opportunity set.
- Recognised stock market inefficiency creates an opportunity to outperform.
- Bottom-up, fundamental approach, embracing complexity and differentiated stock ideas.
- Balanced approach to innovation (Pioneers, Enablers, Adopters) improves portfolio risk profile.
- High conviction, very high active share, low overlap with generalist global funds.
- Team experience and qualifications strongly aligned to the opportunity.
- Amati network is an informational advantage in discovering and analysing innovation.
